So how does one acquire frags for their Nano-Reef? Initially most hobbyists may purchase them from pet stores, but as they become more knowledgeable in the trade, and have perhaps joined an aquarium club or society, they may frequent "frag swaps". These coral sales events seem to be happening more frequently and in more areas lately. Although fragging has been around for a few years now, it has really taken off in the last two or years or so. This has led to more and more hobbyists being aware of industry events like frag swaps, and even researching where and when some of them will be happening.

This is a good omen for the Nano-Reef Aquarium hobby. I encourage anyone who has been thinking about reef aquariums to consider setting up a Nano-Reef and beginning their tanks with a healthy selection of frags. This is a wonderful hobby and definitely my personal favorite. I wish all readers a very enjoyable and lifelong Nano-Reefkeeping experience. ♦

DIY 2 Part + Mg

Low cost. High purity.

Complete instructions on each package. Measuring cup included.

Available in 1 gallon kit (shown) 2 lb. jars, 7.5 lb pails, 30 lb. cartons.

Found at better aquarium and pet shops worldwide.
