

BI OX™

High Efficiency Low Cost Superior Filter Medium

BI OX™ is a scientifically engineered form that is specifically designed for biological filters, gas-liquid reactions and degassing.

BI OX™ increases essential dissolved oxygen, removes harmful gases, neutralizes wastes and allows beneficial nitrifying bacteria to cultivate.

BI OX™ creates a most sophisticated interlocking network producing the optimum level of 'usable surface area™'. BI OX™ is a superior filter medium for use in canister, box, tray, pond and trickle filters.

BI OX™ dramatically increases the carrying capacity and working ability of any existing trickle filter. Far less BI OX™ is required than other mediums to maintain the same size aquarium. Smaller trickle filters can be used to maintain larger aquariums.

BI OX™ is recognized internationally as a superior filter medium by leading aquaculturists, aquatic livestock handlers, fish farms, public aqua displays, and knowledgeable dealers worldwide.

BI OX™ is endorsed by the manufacturers of the best trickle filters.

BI OX™ is another fine product from Aqua Craft™, Inc.
